

Hands-Free Data Collection for the Energy Industry

Field Data Collection

Clip the RealWear headset onto your hard hat, and let VisualSpection document the site as you walk through it. At the sound of your voice, access real-time live streaming, video, photo, audio documentation, and standardized workflows.

Work Management

View the Field Portal, a secure cloud platform, to see your field data as it updates in near-real time. Assign new tasks, adjust workflows, manage your team, and participate in real-time site visits from a distance. No matter where you are, you stay connected with your team.

System & Device Management

As your processes evolve, VisualSpection changes with you.

With built-in flexibility, VisualSpection's Admin Portal gives you the power to create teams within your organization, create and automatically assign work templates, and manage your mobile fleet from your laptop. As the only hands-free, voice-driven, data collector created for utilities and energy contractors, VisualSpection prioritizes your data security and is designed to adapt with you.

The Enterprise Solution

VisualSpection seamlessly connects with your existing system:

Secure REST APIs

Integrate VisualSpection with your data management system for seamless information transfer.

Infrastructure as a System (IAAS)

Own a secure, cloud-based server and centralize data with your other systems.

On-Premises Solution

Keep your data in-house and improve efficiency, security, and agility.
